The Benefits of a Plant-Based Diet

A summary of effects on health and well-being.

Overweight and Obesity

- A plant-based diet promotes weight loss.[6, 7]
- Overweight and obese adults who followed a plant-based diet lost more weight compared with those who followed a vegetarian diet or a nonvegetarian diet (including diary, eggs, fish, and meat) at two and six months.[8]
- Following a plant-based diet for seven days led to a median weight loss of 1.4 kg.[9]

Heart Disease

- Radiographically documented heart disease regression occurred over one year in 82% of study participants as a result of intensive lifestyle changes, including a low-fat, plant-based diet.[10]
- Radiographically documented heart disease reversal occurred in 22% of 177 study participants who followed a plant-based diet; in 93% of those who reported angina at baseline, angina symptoms resolved or improved.[11]
- A meta-analysis of 16 prospective cohort studies found that increased daily consumption of fruits and vegetables was associated with reduced cardiovascular mortality.[12]
- Following a plant-based diet for seven days led to improved lipid panels.[9]
- Significant mean reductions in total and low-density lipoprotein (LDL) cholesterol levels were reported among study participants who followed a low-fat, plant-based diet for 30 days.[13]
- A randomized controlled trial to determine the effect of an 18-week, plant-based nutrition intervention at the workplace found a significant improvement in mean total and LDL cholesterol levels.[5]
- A systematic review and meta-analysis of seven clinical trials and 32 observational studies found that consumption of diets that excluded meat was associated with a reduction in blood pressure when compared with omnivorous diets.[14]

Diabetes

- Following a plant-based diet was associated with a reduction in glycated hemoglobin levels among people with diabetes.[6, 15, 16]
- Consuming meat on a weekly basis for 17 years was associated with a 74% increase in the risk of developing diabetes compared with long-term adherence to a nonmeat diet.[17]

Cancer

- A prospective cohort study of 69,120 adults found that plant-based diets confer a lower risk of overall cancer and female-specific cancers.[18]
- A review of more than 800 studies by 22 international scientists found that consumption of both red and processed meat is associated with cancer.[19]
- Lung, breast, and ovarian cancer have been linked to the intake of dairy foods.[20]

Well-Being

- A randomized controlled trial on the effect of an 18-week, plant-based nutrition intervention at the workplace found significant improvements in depression, anxiety, fatigue, emotional well-being, and work productivity.[21]
- People following a plant-based diet reported less anxiety and stress compared with those who followed an omnivorous diet.[22]

Estratégia?

- Modulação da microbiota
- Equilíbrio do apetite
- Melhora a produção de bile

Anti-inflamatória

Table 2. Sources of notable nutrients	
Nutrient	**Food sources**
Protein	legumes (beans, lentils, peas, peanuts), nuts, seeds, soy foods (tempeh, tofu)
Omega-3 fats	seeds (chia, hemp, flax), leafy green vegetables, microalgae, soybeans and soy foods, walnuts, wheat germ
Fiber	vegetables, fruits (berries, pears, papaya, dried fruits), avocado, legumes (beans, lentils, peas), nuts, seeds, whole grains
Calcium	low-oxalate leafy greens (broccoli, bok choy, cabbage, collard, dandelion, kale, watercress), calcium-set tofu, almonds, almond butter, fortified plant milks, sesame seeds, tahini, figs, blackstrap molasses
Iodine	sea vegetables (arame, dulse, nori, wakame), iodized salt
Iron	legumes (beans, lentils, peas, peanuts), leafy greens, soybeans and soy foods, quinoa, potatoes, dried fruit, dark chocolate, tahini, seeds (pumpkin, sesame, sunflower), sea vegetables (dulse, nori)
Zinc	legumes (beans, lentils, peas, peanuts), soy foods, nuts, seeds, oats
Choline	legumes (beans, lentils, peas, peanuts), bananas, broccoli, oats, oranges, quinoa, soy foods
Folate	leafy green vegetables, almonds, asparagus, avocado, beets, enriched grains (breads, pasta, rice), oranges, quinoa, nutritional yeast
Vitamin B_{12}	fortified foods (nutritional yeast, plant milks), supplement (2500 µg per week)
Vitamin C	fruits (especially berries, citrus, cantaloupe, kiwifruit, mango, papaya, pineapple), leafy green vegetables, potatoes, peas, bell peppers, chili peppers, tomatoes
Vitamin D	sun, fortified plant milks, supplement if deficient
Vitamin K	leafy green vegetables, sea vegetables, asparagus, avocado, broccoli, Brussels sprouts, cauliflower, lentils, peas, nattō (a traditional Japanese food made from soybeans fermented with *Bacillus subtilis* var *nattō*)

Exemplo

- Café

Tofu orgânico + frutas + chá

- Lanche

Castanhas e sementes

- Almoço

Arroz + feijão + legumes + salada crua + sementes + suco de limão

- Lanche

Frutas +Yeast Flakes/ Proteina vegetal

- Jantar

Vegetais + edamame + cogumelos
OU sopa de lentilha

- Café

Mingau de aveia com uva passa

- Lanche

Bolachas de arroz

- Almoço

Arroz + feijão + legumes + salada + sementes + suco de limão

- Lanche

Frutas + colágeno

- Jantar

Vegetais + edamame + cogumelos
OU sopa de lentilha
